

App.html:

```
<h1>reverse string</h1>
```

```
<h2>the reverse of a string is {{'string' | reverse}}</h2>
```

```
<h2>the reverse of a string is {{'string' | reverse | uppercase}}</h2>
```

pipes.ts:

```
import { Pipe, PipeTransform } from '@angular/core';
```

```
@Pipe({
```

```
  name: 'reverse'
```

```
})
```

```
export class ReversePipe implements PipeTransform {
```

```
  transform(value: string): string {
```

```
    return value.split('').reverse().join('');
```

```
  }
```

```
}
```
